

What's New

"Sporty" Linemarker

The first of the new generation sportsfield line markers, the "Sporty", has recently been completed. The "Sporty" is perfect for schools, sports clubs, and municipalities for applying linemarking paint quickly and with the minimum of effort. The tank is pressurised using the easy hand pump and the material is then applied at pressure through the nozzle. The width of the line can also be easily adjusted. A number of improvements have been made to the linemarking unit. A larger wheel is now being used in front rather than the castor on the older models, this increases stability dramatically. The new all viton equipped Bugwiser compression sprayer is now being used to pressurise the material, which substantially improves seal life.

Product in Focus

Compressed Air Foaming Unit

The compressed air operated foaming unit is specially designed for cleaning applications where it is necessary to apply thick volumes of foam. The unit is pressurised by a compressor (not included) and then it is wheeled around on the handy trolley to areas where it is required. The compressed air performs two functions. Firstly it pressurises the tank enabling the operator to dispense the chemical, and secondly it aerates the chemical turning it into a thick foam that is able to hang on vertical surfaces for longer periods of time, thereby increasing its effectiveness. The unit which was designed by Monitor Distributors has been extremely effective in the pig and poultry industries where foaming and disinfecting is crucial to productivity. It is also useful for degreasing applications.

Foot Operated - All Stainless Steel - Eyewash Unit

The new foot operated pedestal mounted eyewash unit is now available. Eyewash units are used in situations where the eyes have been exposed to toxic chemical or foreign objects that need to be flushed quickly. The new unit is able to flush eyes without the operator having to switch a lever or turn on a tap, which is not always possible when vision is impaired. The foot pedal would simply be stepped on and this activates the flow of water, gently flushing the eyes. The specially designed nozzles aerate the water which creates a soft fountain approximately 20 cm high.

Foot operated eyewash unit

Nozzle in Focus

Drain cleaning nozzles can be a handy accessory to your high pressure cleaning unit. Most of the nozzles can be attached to a length of high pressure hose and fed into the pipe that needs cleaning. The nozzle will then use the water pressure to pull itself through the pipe cleaning it along the way.
