

What's New

Locally manufactured foaming lance

Chemical injector

Foaming lance

Monitor has recently released its new foaming locally manufactured foaming lance. The lance, which is used with your Hawk high pressure cleaner, is designed to apply large volumes of foamy chemical onto the surface you want to clean. The chemical

assists with removing stubborn dirt and disinfecting, which is especially handy in the pig and poultry industry. The lance retails for R295.00 + VAT, and the chemical injector, which is fitted on your high pressure unit, retails for R262.60 + VAT

KwaZulu Natal Industrial Trade Show

Monitor will once again be exhibiting on the KwaZulu Natal Industrial Trade Show. The event will take place from 1 to 4 June 1999 at the Durban Exhibition Centre, and is expected to be the largest one yet. A complimentary ticket has been supplied with this months edition of Hawk Clean 'n Coat News, please feel free to use these. If you require any further tickets please don't hesitate to contact Craig Todd on (031) 2054313. We are located at stand B80, and will have all the latest equipment on display.

New colour printer

You may notice that Hawk Clean 'n Coat News is now produced in full colour. This is thanks to our new Tektronix colour printer. The interesting thing about this printer is that it uses a solid wax based media, which is melted and applied at 1000 dpi. This allows us to achieve high quality reproduction and therefore supply better and more versatile information to our customers.

Nozzle in Focus

SF & SM Plastic Fogging Nozzles

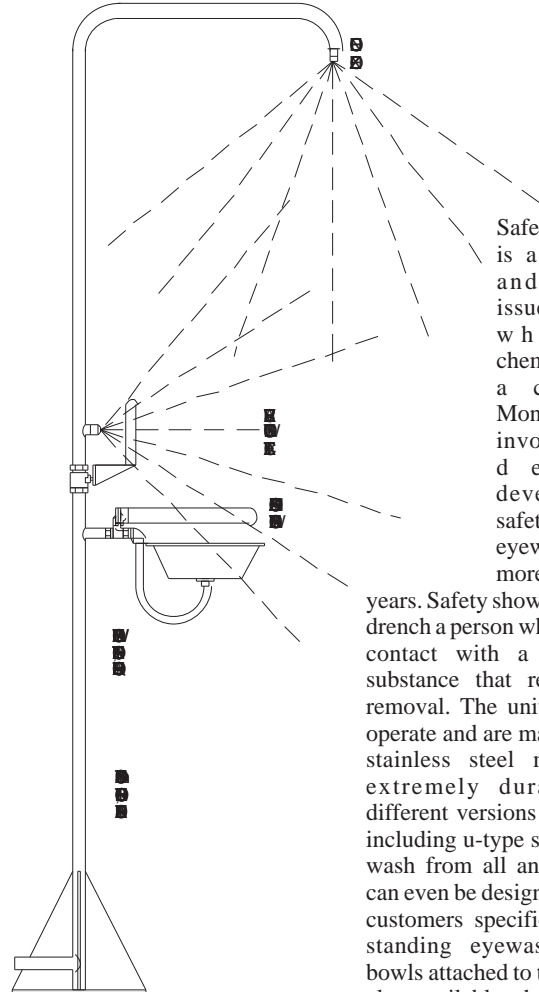

The SF and SM plastic spray nozzles from Spraying Systems are designed for use in fog cooling systems, which makes them ideal for the pig and poultry industry. The nozzles are available in five different capacities, and are able to operate up to a maximum pressure of 14 bar. The tips are manufactured from Acetal to minimize mineral build-up in the flow passage. Monitor is able to design complete systems including all pumping and piping requirements.

Safety Showers

Safety in industry is a very serious and important issue, especially when toxic chemical or fire is a concern. Monitor has been involved in the design development of safety showers and eyewash bowls for more than twenty

years. Safety showers are used to drench a person who has come in contact with a chemical or substance that requires quick removal. The units are easy to operate and are manufactured in stainless steel making them extremely durable. Many different versions are available, including u-type showers which wash from all angles. Systems can even be designed to suite the customers specific needs. Free standing eyewash bowls or bowls attached to the shower are also available, these are handy for flushing any foreign substances quickly from the eyes.
