Issue 20 -October 2000

Hawk Clean and Coat is a division of 

What's New

The New Flojet Vibrating Pump

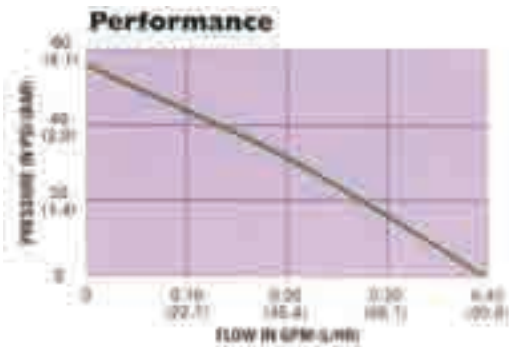

The new Flojet vibrating pumps are designed for general consumer, commercial and industrial applications. All models are self-priming, double insulated and built to draw low Amps for cool operation. These pumps are constructed to deliver fluids of up to 90,8L/Hr and at pressures of up to 60psi (4.1 bar), and are capable of handling a broad range of liquids. They are also available in various port fitting and elastomer options.

The ET508HP model is typically used for consumer carpet extraction machines, with a service life of approximately 1000 hours. This pump has an internal Diode, and it runs dry for short periods.

This range of pumps can be bought from Autrex Industrial 021 963073 (in the Cape area)

Monitor Engineering & Marketing 011 6183860 (in Johannesburg) and Monitor Distributors 031 2054313 (in KwaZulu-Natal).

Meet Our Staff

Watch Out- May be Considered Dangerous!

Malinda Pote joined Monitor in 1984 as a debtors clerk, and since 1998 she has taken over the position of the accountant.

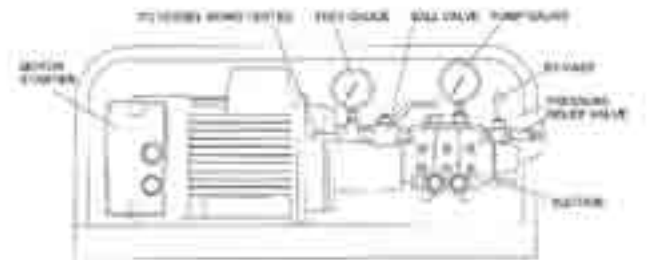

Here she is making sure that nothing leaves the factory without payment.

Product in Focus

Pressure Testing Unit

The Hawk Clean 'n Coat Pressure Testing unit is specially designed to test pipes and vessels at high pressure for any leaks. The unit is connected to one end of the pipe and the other end is blocked. The pipe or vessel is then filled with water and pressurised up to 300 bar. Once the desired pressure is reached, the unit is turned off and the gauge is monitored. Any drop in pressure would indicate a leak. The unit comes in petrol, diesel, hydraulic, pneumatic and electric versions.

Pig and Poultry Show

The Pig and Poultry Show is an annual event which attracts people from the Pig and Poultry industries. As Monitor is involved in the design and development of cleaning equipment, we have been an exhibitor for the last four years.

Humour

"Never forget that not taking a step forward is like taking a step backwards"

Versatile, durable and affordable fogging solutions

Electric ProULV Sprayer for Professionals

The Electric Pro-ULV sprayer for professionals gives more freedom, unlike thermal foggers, the atomising nozzle of Pro-ULV reduces particle size without degrading heat sensitive chemicals. The unit is designed specifically for application of chemicals in an ultra fine mist, with precise output control. It is effective in controlling the usage of expensive chemicals, especially concentrated chemicals which are not diluted. The Pro-ULV is ideal for use with a wide variety of chemicals such as insecticides, disinfectants, germicides, fungicides, miticides, deodorants and wettable powders. It is perfect for use in many applications including industrial, agricultural and pest control fields.

Ultra Low Volume Mist Spray

The average particle size of the fine mist spray is 8.5 microns in diameter. The ProULV discharges a spray of about 30.8m in still air, at a temperature of 50°C.

Easy Flow Control Regulator

The regulator valve makes it possible to control the volume of the spray. This means that wastage of expensive chemicals can be limited.

Specifications

Model number	1035BP
Working Capacity	7.6 L
Tank	Poly
Flow Control	Needle Valve
Hose	Flexible EPDM
Motor	220V
Weight	5.9 kg
