Issue 29 - July 2001

Hawk Clean and Coat is a division of 

What's New

HS335 Diesel Unit

A diesel powered compact high pressure cleaner is now available in the Hawk range. The unit comprises the HS335 Hawk piston pump, and the Kama KM170F engine. The new model is called the D/12-120 and is capable of a maximum pressure of 120 bar and volume of 12 l/min. The unit's reliability and cheaper running costs, make it an excellent option for most industrial cleaning applications. It will retail at a price of R11470 + VAT.

New Guard for FV Rotating Nozzle

The FV series rotating head has recently been upgraded with the addition of a protective casing around the nozzles. This is to protect the head from being damaged while being inserted or removed from manholes on tanks. The price still remains the same.

Meet Our Staff

Bernard has worked at Monitor since August 2000, he is the driver of our bakkie, Hawk 10, and is responsible for all our deliveries in the Durban area.

Product in Focus

HV335

A new unit in the Hawk range makes use of a vertical shaft engine instead of the more expensive horizontal option. It is fitted with the new HV335 pump from Hawk, which is directly mounted on the Intek 5,5hp motor. The unit can maintain pressures up to 140 bar and volumes of 12 l/min with the use this engine, this model will retail for only R6800 + VAT

Comrades Marathon

The Comrades Marathon was held on the 16th June and this year was a down run. Monitor had two mist tunnels along the way. The first was in Hillcrest which was sponsored by Wimpy and the second was near the Tolgate bridge which

was sponsored by the AA. We would like to congratulate all the runners who ran and completed the tough 89.9 kms.

Humour

"He who laughs last thinks slowest."

Versatile, durable and affordable float valve solutions

The "Mac Valve" is a hydraulic pilot controlled float valve with a difference. It solves most of the typical problems associated with float valves. The most impressive feature of this patented valve is how it allows full flow of incoming water. In normal float valves they activate even if a small amount of water is drained from the tank. This doesn't happen to the Mac Valve, as the shut-off mechanism is such that it is either fully open or fully closed.

It is made of polycarbonate which makes it very hygienic. It is available in several inlet sizes including 20mm, 25mm, 32mm, 40mm. The outlet in all cases is 25mm.

Technical Specifications

Material:	Polycarbonate
Operating temperature:	0 - 50°C
Storage temperature:	-20 - +80°C
Service:	Continuous
Working pressure:	0,2 - 6 bar
Inlet size:	20, 25, 32 and 40mm
