

What's New

Water Supply Booster Unit

Hawk supplies water-supply booster units. When water pressure, from mains or from a tank, is not sufficient, the booster unit will solve the problem. It pressurises a quantity of water in the tank, and switches off until that water has been used before switching back on.

This automatic booster system is suitable for distributing water under pressure in residential and small-scale agricultural applications.

High Pressure Hose Reels in Air Supply Application

Hawk's stainless steel hose reel has recently been re-engineered in conjunction with a leading respiratory equipment supplier. The standard hose reel was originally designed for the supply of high pressure water for high pressure cleaning applications. However with a few minor modifications it has proved to be ideal for storing air hose for respiratory supply lines.

Staff

Neren Singh has been working for us for the past three years, he has proved himself as an asset to our workshop and sets a good example. He is an extremely hard worker and specialises in fixing our petrol engines.

Product in Focus

Road Marking Machine

The Hawk 4200 Line Pro is perfect for marking roads, sports fields, garages, schools, parking lots or factories. It is suitable for high viscosity marking paints and is easy to use, affordable and durable. It's three wheel chassis makes it easier to manoeuvre and cheaper than its predecessor. It has a single lockable wheel at the rear, and has a shorter wheel base than the previous model, making it considerably lighter, which makes line marking up hill much easier.

The Hawk 4200 road marker can also be used for conventional spray painting, by simply detaching the gun from the line-marker holder. It can then be used for stencil work or any other coating application.

Humour

"My project's ready for grading, Mr. Big Nose...Hey! I'm talking to you, squid brain!"

"If the brain were so simple we could under stand it, we would be so simple we couldn't."

**Versatile, durable and affordable
steam cleaning solutions**

HOTBOX

An exciting new design has been used for the locally manufactured high pressure water heater. The stainless steel sides clip off for easy access to the boiler and burner. The chassis, ends and top plates are super strong, being made from 2mm thick steel. Connected to a normal cold water unit, the hot box provides high pressure hot water to remove heavy grease and dirt. Local manufacture of the hot box keeps the price reasonable.
