Issue 68 - April 2004

Hawk Clean and Coat is a division of MONITOR DISTRIBUTORS

WindJet Nozzles

AA727 - 1/4
(ABS Plastic Male Conn.)

AA707 - 1/4
(ABS Plastic)

The AA727 WindJet nozzles generate a quiet, efficient, flat fan of compressed air which is ideal for removing excess rinse water and speeding drying times. They can also be used for drying crevices and other hard-to-reach areas. Mounted side-by-side they produce an effective "curtain of air" that prevents liquid carryover.

The AA707 WindJets are designed for air control applications requiring a single stream, high-impact jet of air. They produce a tightly directed round spray pattern with minimum noise levels. Their efficient use of air reduces costs.

Both nozzles are available in durable ABS plastic, PPS (polyphenylene sulfide), sturdy aluminum, PVDF and stainless steel.

These nozzles are available from Monitor Distributors (031 205-4313) as well as Monitor Engineering (011 618-3860) and Autrex Industrial (021 976-3073)

New 350 bar Rotating Nozzles

We have recently imported some new rotating nozzles, they are capable of handling pressures of up to 350 bar at up to 90°C, the new closed casing makes them more robust than previous models. The nozzle sizes vary from an 035 to 09 l/min. It makes use of a rotating nozzle which delivers the extra impact and cleaning power of a solid stream, while the high speed rotation creates a spray pattern giving larger coverage. In this way, you are getting the best of both worlds, cleaning efficiency can be increased by as much as 80%.

Roof Cleaning High Pressure Cleaner

Here is another example of how we can custom design and build any unit to suit our customers application.

This unit was designed for roof cleaning, it is a standard high pressure cleaner with a live hose reel mounted onto the chassis, keeping the hose neat and preventing it from getting damaged.

Although Aveer Newal has only recently joined our stores team, he has already shown that he is a fast learner. If he is as hard working and friendly as his father Danny and brother Vikesh, he will go a long way with Monitor.

"Hors d'oeuvre?"

"Life is what happens when we're making other plans."

Versatile, durable and affordable under body cleaning solutions

Under Body Washer

Hawk was asked to design a rotating nozzle unit to wash the underbody of trucks and bakkies. It sprays water at high pressure under the vehicle, which removes the dirt and grease that has built up. Four castor wheels allow the unit to move easily under the vehicle. The system is powered entirely by the high pressure water from the Hawk high pressure cleaner and does not require any additional power or water supply.

Technical Data

Part No.	Configuration	Max. Bar	Max. L/min	Coverage
WAW1600F	Handles & castors	300	23	16"

Unique Rotating Arms

The unit consists of two rotating flat or solid stream nozzles attached to two arms that rotate at very high speed.

Unique Guarantee

Precision engineering and the use of high quality materials have enabled Hawk in South Africa to give a comprehensive Guarantee to cover their products. A full one year's warranty covers the workmanship and materials against defects, while they are also covered by a unique spares guarantee. Should the required Hawk pump or accessory spare part not be available within 24 hours because of a out-of-stock situation, they will be airfreighted from the factory, and fitted, free of charge.
