Issue 67 - March 2004

Hawk Clean and Coat is a division of  **MONITOR**

Under Carriage Washer

Hawk was asked to design a rotating nozzle unit to wash the underbody of trucks and bakkies. It sprays water at high pressure under the vehicle, which removes the dirt and grease that has built up. Four castor wheels allow the unit to move easily under the vehicle. The system is powered entirely by the high pressure water from the Hawk high pressure cleaner and does not require any additional power or water supply.

Electric Hot Water Units

The Hawk electric hot water units are gaining popularity in applications where diesel fired hot water systems are not suitable. Pictured is a two pump electric hot water unit recently designed for a mining application. Systems are available in various pressure and volume configurations and are able to produce hot water under pressure at up to 65°C.

Iqbal has joined our sales team in Johannesburg, he has proven himself as an excellent salesman. He is Amina's husband and in spite of his beard, is not related to you-know-who!
