

ISO 9001:2000 Approved

In an on-going effort to provide excellent quality, service and products, Monitor has recently been awarded ISO9001:2000 status.

Breathing Unit

Once again we have designed a unit specifically for a customer. The application was to supply air to a person working in hazardous conditions.

Two 3000 bar air cylinders are placed in holders and connected to an air hose via a demand regulator which is then connected to the mask of the person requiring air. The hose is coiled onto a live hose reel for easy handling.

New Base for Safety shower

As a result of customers with special application problems, we have now decided to supply U-Type Safety showers with either a rubber mat or open mesh bases. The expanded metal mesh is heavy duty stainless steel. Both options are the same price.

The U-Type Safety shower retails for R4210.00 + VAT with eyewash bowl and R3380.00 + VAT excluding eyewash bowl.

Lazer Cut Under body Washer

In last months newsletter, we showed a prototype of the under body washer. The final version is now lazer cut and looks excellent.

Well Done, Amina!

Someone phoned into our Johannesburg branch and ordered a unit, he claimed that a cheque had been cleared through BOE and said that Amina could phone BOE for confirmation and gave Amina BOE's number and a contact person. Amina was suspicious so she played it safe and looked up BOE's number in the phone book rather than use the number she had been given. When she phoned BOE (on the different number), she was informed that no-one by the contact name she was given worked there. Watch out for similar scams!

"Whether you think that you can, or that you can't, you are usually right."

Versatile, durable and affordable safety shower solutions

U-Type Safety Shower

The U-Type shower is designed to incorporate multiple fullcone nozzles to ensure that the user is completely drenched from all sides. This is particularly useful in more dangerous situations where instant all round drenching is required.

Material Breakdown

Pipe	Stainless Steel
Nozzles	Chrome Plated Brass
Ball Valve	Brass
Eyewash Bowl	Stainless Steel
Eyewash Nozzles	Chrome Plated Brass
Inlet	3/4"

Specifications

Overall Height mm	2100
Base Plate mm	600x600
Number of Nozzles	13

Stand alone eyewash units are also available. They are used for flushing foreign objects or chemical quickly from the eyes using a soft foaming nozzle system. The model pictured is the foot operated version, however a wall mount, lever operated version is also available. They are constructed from stainless making them extremely durable.
