Issue 77 - February 2005

Hawk Clean and Coat is a division of 

## Pneumatic Airless Spray Pumps

Pneumatic airless sprayers are designed to spray coatings at very high pressure, airlessly, at high speed. The units are ideal for operations requiring the mobility of a cart-mounted sprayer or they can be wall mounted. They are ready for use right "out of the box" and are equipped with gun, fluid hose swivel and whip hoses to provide the operator with maximum comfort and handling ease. These sprayers deliver trouble free reliability, mainly because of the slow piston stroke rate (a maximum of 60 strokes per minute), and because of the fact that they are made from stainless steel. In addition to the new 40:1 range arriving later this month, we are still able to supply the Graco President 30:1 (paint pressure of up to 210bar)

**Hoffman Engines** have proved themselves over the last four or five years to be reliable and long lasting. So much so that we now feel confident to sell bare engines as well as petrol and diesel generators and contractors pumps. They are available in 5.5, 6.5, 8, 9, 11 and 13 hp sizes in petrol as well as 4.7, 6.7 and 10 hp in diesel with both parallel and taper shafts. What really makes this range a winner is the price.

## Reversible, self cleaning airless spray tips

These reversible, quick changeable, airless spray tips with safety guards are self cleaning and now available from Monitor Distributors. They are inter-changeable with most other makes, but are far less expensive.

## Meet our staff

Meet our most recent member of our sales team, Oswell. He has worked in our stores and learnt our products well enough to start helping customers at the counter. With a charming personality he is sure to be liked by all.
