Issue 89 - August/September 2006

Hawk Clean and Coat is a division of **MONITOR** DISTRIBUTORS CO

Hawk RCC Pump

We have introduced the new **Rotary Constant Cavity** pump. With no sliding action to damage the liquids being pumped, virtually no maintenance is required. The pump chamber's shape is similar to the rotor, allowing it to maintain a continuous contact point on the inner surface, giving constant separation between the suction and delivery sides. The product passes through the pump in a calm and even flow leaving its characteristics unaffected, whether pumping solvents, food products (custard and yoghurt are not affected - no sheer), high viscosity fluids (molasses or honey), or fruit chunks in jams. The low speed of the rotation and large passages are particularly suitable for transferring large suspended particles. They are solid and extremely simple, self priming, reversible, and have large inlet and outlet ports with no valves or pump seals. This pump is made up of cast iron, food grade bronze or stainless steel. The pump can be mounted as fixed installations, on wheels or on vehicles. The capacity is strictly proportional to rotation speed. Models range from 17 l/min to 2900 l/min at up to 9 bar. The maintenance is limited to eventual replacement of shaft rings in case of leakage. It can be used in the food, oil and chemical, textile, paint and printing industries.

High Pressure Hose Boom

The new Hawk rotating high pressure hose boom swivels through 360° if mounted under the roof, or 180° if mounted to a vertical wall. Made entirely from stainless steel and capable of handling very high pressures makes it useful for applications where a hose must be kept off the floor. The most appealing feature is that the price is lower than currently available mild steel versions.

New Spray Boom

An interesting request for a sprayer for golf course greens resulted in the illustrated sprayboom. Folding up to half its width makes it easy to transport and store. Powered by the Hawk 100liter power sprayer it can be used for a variety of other applications like bowling greens and lawns.

Staff from Durban and Joburg at a sales conference held at Harrismith. Well worth the effort!!

Don't forget to visit us at hall 8, stand C10 at one of Africa's biggest specialized mining, construction, electrical and industrial exhibitions that will be held at the Expo Center, Nasrec, Johannesburg from the 11-15 September 2006.
