

## New Hawk Spray Guns - W550

The new W550 HVLP Spray Set in the handy carry case is perfectly suited for all light and decorative work with low over spray. The set contains two gun front sections for fast color changes as well as a detail spraying attachment for easy coating of difficult places. The air turbine is built into the gun head, removing the need for a separate compressor. Two lids are supplied for

trouble-free storage of remaining paint. With this fine spray system the paint-containing parts can be separated from the turbine allowing fast colour changes and simple trouble-free cleaning.

## Paint Crew

Perfect results with the Paint Crew airless painting unit achieve a uniform application of paint on interior as well as outside walls. This universal paint spraying system was specially developed for emulsions and latex paints, but it is also very suitable for many other materials. This unit is ideal for the easy, professional application of paint to plastered and textured surfaces with very little over spray. Where a conventional airless unit sells for R16000.00 + VAT, this unit will be under R6000.00 + VAT. The gun comes complete with a 7,5m hose and two reversible (for self-cleaning) nozzles, 0.015" - 50° and 0.009" - 40°.

## New Look

The new-look petrol powered 350 and 500bar Hawk high pressure cleaners have come a long way with a twin cylinder Kohler, electric-start, engine and high density polyethylene fuel and water tanks. Built this way for ease of handling and as robust as possible, it is compact and reliable. The exhaust now has a perforated plate cover to protect the operator from burns.

## Welcome Pump and Spray

Monitor Distributors / Hawk have acquired Paul Garnham's company, Pump and Spray which has a good reputation and will be a distinct asset for the group. Paul will manage the Johannesburg branch and bring in his experience and expertise in high pressure cleaning and evaporative cooling.

## Excellent Workmanship

When Cammy started wiring the Hawk electric hot water units, we thought that a sparrow had been busy building a nest. He has, of his own accord, improved the layout to a point where the unit looks totally professional. We are pleased with this dedication.

## AVI AFRICA 2007 Poultry Show

We will be exhibiting once again at the largest poultry show in Africa from the 23rd to the 25th April 2007 at Gallagher Estate, Johannesburg. You can visit us at stand number 116. We look forward to seeing you there.

"So you think that your Chico can accelerate?"

Can you believe it.....

An SABC news reader said that after a truck had crashed over a bridge, flattening a car, mopping-up operations were still under way.
