## Christmas Greetings

The management and staff at Monitor Distributors would like to take this opportunity to wish you and your staff the very best festive season. We would like to thank all our friends for a wonderfully prosperous year and look forward to even better times ahead. With many exciting new developments planned for 2011 we are expecting the new year to be even brighter.

## New Hawk High Pressure Cleaner

A new Hawk machine has arrived. It is an industrial 230V unit delivering 10 l/min at up to 150 bar. The cover is also a tank which holds the chemical. The nozzle is adjustable for width and pressure (to activate the chemical injector) and the unit is fitted with a "total-stop" electrical system. This machine should not be confused with the discount / hardware stores products which are good but are domestic level machines. Hawk in South Africa has run field tests with six of these these machines and did not have a single comeback in several years.

## New Hawk Stainless Steel Hose Reel

The Hawk hose reel has been redesigned substantially. It now comes in three diameters and two widths. An important new feature is that the hose guide can be positioned upright (for when the reel is suspended from an overhead beam), and four positions either side, giving a total of nine guide positions. The inlet can be placed either end. The whole unit is in polished 304SS.

## Meet our Staff

## Happy Christmas

Santa has arrived and is working for Hawk Pumps. Wally Allen has taken over stores control and we hope he gets as much fun as he does at a Sharks game.

## Humour
