## Hawk HHP 350 bar Pump

The pump manifold is made from "ecobrass", an environment-friendly brass alloy with mechanical properties equivalent to 316 stainless steel. It delivers 38l/min at 1450 rpm at 350 bar. The u-shaped seal packings have a longer seal life than the usual chevron packings and require less maintenance.

## Hawk HHP 500 bar Pump

The new model HHP pump delivers 25 l/min at 500 bar at 1000 rpm. Because the manifold is manufactured from special brass, the price is very attractive. Power requirement is 24Kw.

## New Higher Volume Pump

The new VX-B range of pumps starts at 98 l/min at 200 bar to 154 l/min at 130 bar. Useful for cleaning storm water drains and a wide variety of industrial applications, it is expected to be a welcome addition to the Hawk range. Because the manifold (head) is made from a special brass alloy the cost is a lot lower than the usual cast iron pumps on the market at present. It requires 37,5 Kw of power and works at 1000 rpm.

## Drain Cleaning Trailers

Three more drain cleaning trailers being loaded for transport to customers as part of the order for five. Powered by 4-cylinder diesel engines the Hawk pumps deliver 80 l/min at up to 280 bar, these machines are proving popular. Each has a 100m high pressure hose on a hydraulically powered hose reel, with retro spray nozzles for cleaning sewers and drains.

## AVI Africa 2010

Neville, Iqbal and Troy manned the Avi Africa poultry show from the 31st May to the 2nd June this year. Hawk's presence represents its involvement in the chicken industry, supplying high pressure cleaning equipment, sanitizing units, foaming and disinfecting systems and evaporative cooling systems. The 3-pump chicken-house cleaning trailer attracted a lot of attention. We were rated amongst the top 4 stands at the show which made us very proud.

## World Cup 2010

*"Feel it, it is here!"*

**Monitor's Durban Staff all dressed up for the opening of the world cup**

*"Forgive your enemies, but never forget their names"*

Versatile, durable and affordable line-marking solutions

**HAWK 4200LP**  
**LINE MARKING UNIT**

### Technical Data

<b>Model:</b>	4200LP	6500LP
<b>Motor:</b>	3.5 Hp	5.0 Hp
<b>Fuel:</b>	Petrol	Petrol
<b>Max Operating Pressure:</b>	200 Bar	220 Bar
<b>Max Volume at 120 Bar:</b>	4.0 L/min	7.0 L/min
<b>Max Tip Size:</b>	0.021"	0.041"

### Affordable Power

The Hawk LinePro range has been improved with the development of a new three wheel chassis, making it easier to manoeuvre and cheaper than its predecessor. It has a single lockable wheel at the rear, and has a shorter wheel base than the previous model, making it considerably lighter, which makes line marking up hill much easier. The unit is perfect for marking roads, sports fields, garages, schools, parking lots or factories. It is suitable for high viscosity marking paints and is easy to use, affordable and durable.

The Hawk LinePro can also be used for conventional spray painting, by simply detaching the gun from the line-marker holder. It can then be used for stencil work or any other coating application.
