clean and coat news

Issue 118, January 2012

Did you know?

Belt-Drives:

Belt driven pumps are ideal for cleaning applications requiring 40+ hours of use per week. The belt connecting the engine or motor with the high-pressure pump dissipates heat and vibration. This minimizes the wear and the repairs to key components. It extends the life of the pump by reducing the pump speed.

Direct-Drives:

For applications not requiring more than 30 hours of use per week, direct driven pumps are more commonly used. The pump is directly coupled to the engine or motor causing the pump to turn at twice the speed of belt drive models. The pump efficiency is also reduced.

Motor frequency adjustment

Regulating valve to adjust droplet size

New Fogging Sprayer

The new Hawk portable sprayer can be used for epidemic prevention as well as disinfection, sterilization and odour control in hospitals, restaurants, hotels and other public places. It is useful for disinfection and immunisation for poultry, sheep and cattle farms.

The cold-mist sprayer is reliable, simple to operate, and is light to carry. The major components are made of corrosion resistant plastic to ensure longer life.

This sprayer is not designed for spraying explosive, inflammable and corrosive liquids, or viscous liquids or powder.

Hawk 80lit foamer

The new 80lit stainless steel foam washing machine is ideal for applying detergents before cleaning.

This foamer is made from heavy duty stainless steel for rust resistance. It has a safety relief valve which opens when the pressure reaches 3 bar.

A gauge tube on the side shows the level of the liquid.

Pressure is controlled by an air pressure regulator.

Working pressure 1-3bar

Solve your leaking problems

The Hawk Pressure Testing Unit is specially designed to test pipes at high pressure for any leaks.

Once the desired pressure is reached the valve is turned off and the gauge monitored. Any drop in pressure would indicate a leak.

The model shown is the standard Hawk pressure testing units.

However machines can be custom designed and built to suite just about any application.

Staff Corner

Monitor bids farewell to Muhammad from our sales department. He has proven himself to be an excellent salesman.

We will miss him and wish him well in his future plans.
