

Did you know?

The Hawk Total Stop was designed to automatically switch the unit off when the gun has been closed for over 30 seconds.

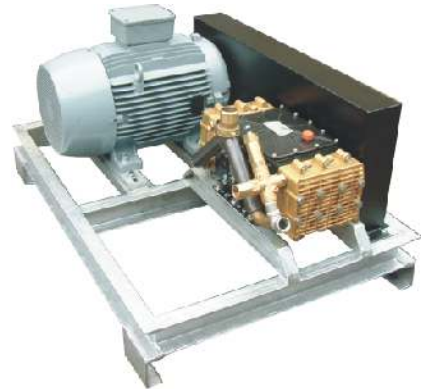

It works with all Hawk high pressure cleaners. The electronic board is fitted inside the starter box and protects the motor and pump from running in bypass mode for long periods.

If the operator re-opens the trigger within the 30 seconds, the Hawk Total Stop will reset and continue running until the gun is closed again.

A optional second pressure switch re-starts the motor when the gun is opened to save the operator having to walk back to the machine.

Another Successfully Customized Unit

Hawk is well known for customising machines for clients' requirements. This unit operates at up to 80 bar with a delivery of 200 l/min. It will be used for conveyor washing. The pump has six pistons horizontally opposed, and runs at 600 rpm.

Someone poured fabric softener in the bird bath!

"It is better to keep your mouth closed and let people think you are a fool than to open it and remove all doubt." [Mark Twain](#)

High Pressure Cleaners with Gearbox

For years Hawk has been using belts and pulleys in order to soften the drive of the pumps from the engines. However this reduced the efficiency and the pumps required more power than they would if an electric motor were used.

These machines are now being fitted with gearboxes, which are a lot more efficient and make disassembly for repairs a lot easier and faster. The prices have not changed.

Staff Corner

Meet Anderson and Ian who are part of the Durban stores team.

They assist in the daily running of the stores to ensure efficiency and accuracy is maintained. They have proved to be very valuable hands-on and reliable. All the best guys!

Hawk Website Re-Launched

In November 2012 the Hawk website was re-launched. With a brand new look, it has more detailed information and is user friendly. A few more features like the gallery and blog will soon be activated.

Our Facebook page is up and running so please look out for it to keep up to date with the latest product information.
