

Did you know?

Monitor Distributors has, for many years, been a supplier of nozzles and spraying equipment. Originally limited to operating in KZN, they are now able to distribute nationally.

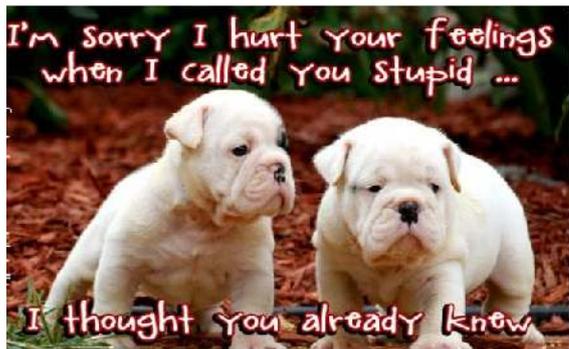

In Natal, they captured most of the market in the pulp and paper industry as well as the sugar industry and they cover most of the industrial applications.

The prices of the nozzles supplied, make Monitor Distributor's equipment extremely competitive.

"Don't think too much, you might create a problem that wasn't even there in the first place."

Drain Cleaner - 120l/min @ 150 bar

The new Hawk drain and sewer cleaner is now available.

Suitable for larger pipes, it has an hydraulically operated hose reel, and can be fitted with either lightweight sewer hose or the more common wire-reinforced rubber hose.

The trailer is hot dipped galvanised for corrosion resistance and is roadworthy and registered. The chassis is "micro-dotted" against theft.

VB33 Unloader Valve for use with more than one gun

Valve suitable for use with more than one gun at the same time. Dynamic seals made up of o-ring and teflon runner.

Optimized internal passages that guarantee reduced pressure drop. The valve has been designed for continuous use with water at 60°C.

O-rings of the fittings positioned upstream of the threads are ejected in case of over pressure.

G1/4" F or 1/4" NPT F fitting for pressure gauge.

Operates at up to 80 l/min and 280 bar

Hydraulic Flanges

A new flange is available for certain of the Hawk pumps for attaching a hydraulic motor.

This allows the pumps to operate where hydraulic power is available, on trucks, tractors or from a hydraulic power pack.

They are particularly useful where electric motors and combustion engines are not convenient or present a hazard.

New Hawk Eco Fogging Pump units

Hawk now produce a very good, industrial quality, range of pumps for use in fogging/misting applications.

The pumps have a hollow shaft and flange for direct coupling to an electric motor. A built-in pressure valve reduces the plumbing to a single inlet and a single outlet. The bypass is internal.

The pumps will be available as bare pumps or with a motor and starter. Volumes are 1, 2, 4, 6 and 8 l/min at up to 100 bar.
