

Another Custom Made Design

A Zimbabwean company needed to clean with high-volume and high-pressure. The machine decided upon was 135 l/min at 300 bar. Using a geared HPP pump powered by a 75Kw motor this was easily achieved. Known for it's long lifespan the HPP pump will ensure that repairs will be at a minimum.

HPP pumps are now available for pressures up to 1500 bar and volumes up to 480 l/min in spheroidal cast iron as well as models with stainless steel heads. They are covered by a three year warranty against faults in materials and workmanship.

Cooling of Metals

Fogging/misting nozzles are well known for cooling by evaporation. Normally used to cool the air inside restaurants and homes, these nozzles can also be used for creating humidity and a wide range of dust suppression and, in this case, to cool hot metal billets and extrusions.

Dust Suppression for Crushers

Another dust suppression application where a fine mist will remove the bulk of the dust created when rock is crushed at a quarry. Conveyor transfer points have a similar problem and a shroud of mist will help enormously.

Hawk has also developed a range of pumps specifically for misting applications, from 1 l/min upwards.

Staff News

Meet Cyril who has recently joined our stores team. He comes with experience as a storeman and has already proven to be efficient, reliable and always keen to finish the task at hand and move onto the next one.

Welcome Cyril.
