

Drilling powerpacks on the go

When the need for a custom built trailer to transport the hydro-drilling powerpacks arose, we designed the one in the photo. The problem was that each powerpack weighs over a ton, so the design had to accommodate up to 3500Kg.

When the trailer was towed to Johannesburg, the driver said that he could hardly feel the trailer behind him. It helped that the towing vehicle was an enormous Mercedes van!

Staff Party

Last Friday we had our staff Christmas lunch. Everyone took the time to relax and enjoy the tasty meals, exchanging of gifts and each others' company.

Pressure Tester

The bulk of pressure testers that Hawk builds are in the 15 l/min category. Sometimes, however, a much bigger one is required. If a large vessel or a big diameter pipe needs testing, and the pipe tends to expand, and a large volume of water has to be pumped. The latest pressure tester, on a trailer, delivers 154 l/min at up to 100 bar.

Sandblasting

Occasionally a difficult cleaning problem needs solving. A customer needed to remove Teflon coatings from his vessels. The job proved easy with a 17 l/min, 500 bar pump, with a grit blasting head fitted to the gun. As speed was the important factor, he was happy when we filmed the tests and he saw the results. There has been a surge of interest in the 500 bar machines.

There are pumps in the range that can deliver 15, 17, 21, 27, 30, and 41 l/min.

Happy
Holidays!

Durban and Jhb branches will be closing for the summer holidays from the 11th December 2015 to the 4th of January 2016.

We would like to thank our customers for their support throughout 2015 and wish them a happy holiday and a prosperous 2016.
