

Compact Trailer

Because of the number of enquiries for a general purpose washing and sewer cleaning machine for plumbing operations, Hawk designed a new compact trailer. It is light and narrow and is suitable for cleaning drains up to 150mmØ.

The tank has a float valve for connecting to the mains water supply and with the petrol powered engines, a low-water level protection switch.

It can be fitted with one or two hose reels - one with a hose, gun, lance and nozzle, and the other with a longer hose with a drain cleaning nozzle. It can be towed by even the smallest vehicle.

Air-knife

In the range of air blow-off nozzles, Hawk now has a new range of air knives. Used in conjunction with a blower or compressor, they are designed to deliver a concentrated sheet of air for removing dust or liquids especially on conveyors. Over doors they act as air curtains.

There is also a compressed air vacuum nozzle which is used to transport gasses, smoke and small articles in a pipe. An air blade ioniser can be used to neutralises static in order to blow dust off things like plastic sheet in the bag manufacturing industry.

Diaphragm Pumps

The ever-popular diaphragm pumps have now been extended with a bigger pump which will deliver 40 l/min. Available in 12V or 230V this pump can handle liquids that plunger pumps can't and it can suck to a height of several metres.

The diaphragms are suitable for a wide range of chemicals at up to 3,5bar.

Telescopic High Pressure Lance

What do you do when the surface you need to clean is beyond your reach? Scaffolding is cumbersome and expensive. The new Hawk telescoping lance is the solution. There are two versions; 5,5m and 7,5m. They have shoulder straps for easy handling.

Staff Corner

We welcome Jackie, the newest member of our stores team.

She has already proven to be efficient with addressing queries and solving problems.

All the best Jackie.
